DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview on 4/24/2006.

The application has been amended as follows:

Claim 1. A manual electric generating device, comprising an uppercasing, being hemispherical in shape and having a first hollow cavity at its top; a lower casing, being hemispherical in shape and engaged with said upper casing to define an accommodating space, and having a second hollow cavity at the bottom of said lower casing; a rotor, being disposed in said accommodating space and capable of rotating reciprocally in said accommodating space and having at least one permanent magnet thereon; a fixes stand, for supporting and mounting said rotor; a hollow cylinder being inserted into said second hollow cavity and having at least one opening at its external periphery; a coil, being disposed in said hollow cylinder and having a core and a plurality of coiled conductive wires; wherein said conductive wires surround said core, such that when said rotor rotates reciprocally, said permanent magnets divide said coil to generate a power supply; and a printed circuit board, being coupled to said coil and

Application/Control Number: 10/809,490 Page 3

Art Unit: 2834

disposed in said hollow cylinder, for processing and outputting said power supply for selectively charging a portable electronic device and lighting up an indicating lamp.

The following is an examiner's statement of reasons for allowance:

Allowable Subject Matter

Claims 1-13 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant teaches a manual electric generating device, comprising an uppercasing, being hemispherical in shape and having a first hollow cavity at its top; a lower casing, being hemispherical in shape and engaged with said upper casing to define an accommodating space, and having a second hollow cavity at the bottom of said lower casing; a rotor, being disposed in said accommodating space and capable of rotating reciprocally in said accommodating space and having at least one permanent magnet thereon; a fixes stand, for supporting and mounting said rotor; a hollow cylinder being inserted into said second hollow cavity and having at least one opening at its external periphery: a coil, being disposed in said hollow cylinder and having a core and a plurality of coiled conductive wires; wherein said conductive wires surround said core, such that when said rotor rotates reciprocally, said permanent magnets divide said coil to generate a power supply; and a printed circuit board, being coupled to said coil and disposed in said hollow cylinder, for processing and outputting said power supply for selectively charging a portable electronic device and lighting up an indicating lamp.

Application/Control Number: 10/809,490

Art Unit: 2834

incontrol Number. 10/000,40

Mishler (U.S. Pat. 5150625) discloses a manual electric generating device.

However, the cited reference fail to individually disclose, or suggest when combined, a hollow cylinder, being inserted into a lower casing hallow cavity and at least one opening at its external periphery, and a printed circuit board, being coupled to said coil and disposed in said hallow cylinder, for processing and outputting said power supply

for selectively charging portable electronic device and lighting up an indicating lamp.

No prior art was found teaching individually, or suggesting in combination, all of the features of the applicants' invention, specifically a hollow cylinder, being inserted into a lower casing hallow cavity and at least one opening at its external periphery, and a printed circuit board, being coupled to said coil and disposed in said hallow cylinder, for processing and outputting said power supply for selectively charging portable electronic device and lighting up an indicating lamp in combination with the recited structural limitations of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yahveh Comas whose telephone number is (571)272-2020. The examiner can normally be reached on 8am-5pm.

Art Unit: 2834

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on 571-272-2044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
